

Briefing - Web Version for Truth Seeker

Overview

Truth Seeker Web is the browser counterpart to the existing Truth Seeker / People Finder app. It expands people-search capabilities beyond the app store ecosystem — capturing organic search and paid acquisition traffic, and bypassing strict store-policy limitations on people-search use cases.

Benchmarked against two references:

- **ClarityCheck (main reference, feature parity target):** Subscription web product with five lookup tools (phone, email, image, VIN, people), 7-day trial at a low entry price, monthly recurring billing, and aggressive credit-pack upsells.
- **DeepSearch AI (secondary, behavior reference):** Closer to the current Truth Seeker app experience. Used as a sanity check on input flows and report layouts already validated in our category.

V1: Launch an MVP sufficient to open paid acquisition channels and validate ROAS against portfolio benchmarks.

V2: Roadmap evolution to match and surpass main competitors.

Core Features Summary

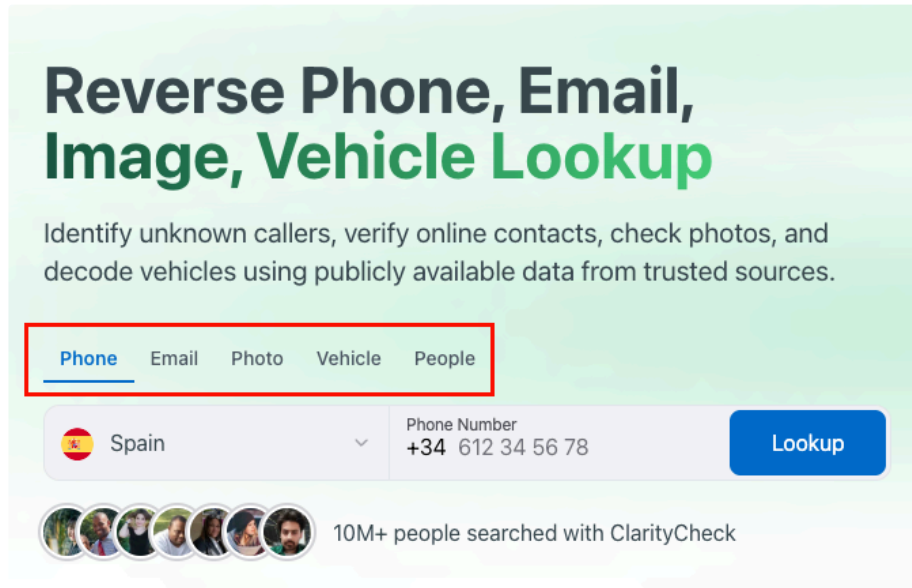

The following screens and feature blocks compose the full product:

1. Public Landing Page — one per lookup type (phone, email, image, VIN, people) for SEO + paid landing.
2. Lookup search widget, embedded across landing pages.
3. Dynamic Loading screen showing progress while gathering info.
4. Pre-paywall report preview screen.
5. Paywall with trial offer.
6. Full report screen (per lookup type).
7. Settings, subscription management & cancellation portal (Stripe).
8. Analytics, monitoring, and remote configuration.
9. Search history.

Features Detail

Lookup Engine (5 lookup types)

Five lookup entry points sharing one underlying search/report pipeline. Each type accepts its own input and surfaces a tailored report. The five types are: **Phone, Email, Image (reverse image), VIN/Vehicle, and People (name-based)**.

Input fields per use case:

- **Phone:** Country prefix + phone number.
- **Email:** Email field.
- **Photo:** Upload photo.
- **Vehicle:** Country selector + VIN/plate number.
- **People:** Name field.

Report Screen

Per-lookup type report layout surfacing third-party API data: name, address history, family/associates, social profiles, email/phone cross-references, employment history, web mentions, dating profiles, carrier/line type (phone), VIN decode (vehicle).

Get Report

Paywall & Free Trial

- Remote configurability for pricing, localization, and trial-length experiments is under review (PO + CRO). Given web deployments are instant, the CRO opportunity is higher than on mobile — remote config is strongly recommended.
- Payment methods from day 1: Debit/credit card, Apple Pay, Google Pay (mirrors Faxon web).

Pricing model

TBD with CRO.

Search History

List of past searches with quick re-access, credits balance, plan status, and CTA to upgrade.

Settings

For the MVP, the approach mirrors Faxer web:

- User badge/profile: email and log out.
- Subscribe option: launches paywall. Once subscribed, shows "Active" + Manage Subscription → redirects to Stripe.
- Dark / Light mode.
- Language selector.

SEO Surfaces

Static, indexable landing pages per lookup type, plus supporting content: phone directory / area-code pages, FAQ, robots.txt, sitemap.

Integrations

Technologies required in V1. Left column is the mobile reference stack; right column is the web equivalent.

Mobile reference (apps)	V1 web equivalent	Purpose
Amplitude SDK	Amplitude Browser SDK 2.x	Product analytics, funnel tracking, experiment exposure.
Crashlytics	Sentry or Firebase Performance Monitoring + JS error logging	Frontend error tracking, performance monitoring, release health.
Firebase SDK (incl. BigQuery export)	Firebase Web SDK + Google Analytics 4 with BigQuery export	Behavioral analytics, attribution, downstream warehousing.
Firebase Remote Config	Firebase Remote Config (Web SDK)	Server-driven feature flags, paywall variants, pricing experiments.

Backend System	TBD with Engineering	Search orchestration, third-party API redirection, account state.
Stripe	Stripe Web Billing	Subscription billing, trial management, payment methods.

Additional Notes

- **Paywall:** Superwall's web support is limited. Recommended approach: web-native paywall built in-house (Stripe Checkout or Stripe Elements + custom UI) with variants driven by Remote Config.
- **Amplitude events:** Minimum event set for MVP — landing page view, search submitted, paywall view, trial started, trial converted, subscription active, cancellation. Event naming must align with the app's existing schema.

Dependencies

Dependency	Owner	Status
Backend / Tavily (blocker) — Confirm whether the current service supports a web surface or if a pivot/addition is needed.	PO + Engineering	OPEN
SDK credentials & API keys — Firebase, Amplitude, Stripe, Sentry, Remote Config, Google Ads pixel, Meta pixel.	PO	OPEN
Stripe account approval — Category review required;	PO	OPEN

people-search vertical is sometimes flagged by processors.		
Legal review — Privacy policies (EU + US), Terms, FCRA disclaimer, acceptable-use clause, cookie banner, GDPR rights flows, ClarityCheck compliance posture. Required before paid traffic.	Legal team	OPEN
Tavily web terms — Confirm Tavily permits a web surface and clarify incremental volume costs.	PO	OPEN

V1 Scope

Objective: Launch an MVP sufficient for marketing campaigns and ROAS validation.

Main focus: **People** use case.

Feature	Description
People Lookup	Name-based people search including: main search box, topic filters (Education, News, Business, Professional, Family, Relationships), most-searched public figures, and advanced fields (full name, location, tags).
Navigation menu <i>(left or top — to decide in Design)</i>	New search, History, Go Pro / Paywall, Settings, Collapse/Expand.
Go Pro / Paywall	Trial + subscription offer. Triggered from "Go Pro" CTA and before showing full report.

SEO	People lookup landing page + FAQ, sitemap, robots.txt.
Dynamic loading screen	"Generating/searching" state while info is gathered. Detail to be defined in design phase.
Report screen	Full report layout per lookup type.
Search history	Past searches with quick re-access. Empty until first paid search.
Account creation / sign-in	Email + password and Google/Apple SSO.
Settings > Account	Name, email, password reset.
Settings > Plan	Billing, one-click cancel, retention offer (TBD).
Settings > Help & Legal	Contact us + legal pages — static compliance and support surfaces.
Settings > Danger Zone	Reset searches and delete account.
Notifications	Email notification when a report is ready.
Analytics & event tracking	Amplitude + Firebase events across the funnel.
Remote config	Server-driven flags for paywall, onboarding, upsell.
A/B Testing	A/B testing infrastructure for feature experiments.
Error & performance monitoring	Web error tracking and Core Web Vitals.

Success Criteria

Metric	Target
ROAS D4	10–15%
ROAS D7	15–18%
ROAS D30	40–50%

Trial Conversion Rate	≥ 10%
-----------------------	-------

🎯 V2 Scope

Objective: Add the remaining use cases supported by [🔍 Reverse Phone Lookup — ClarityCheck](#) to reach full feature parity and improve performance.

Feature	Description
Phone Lookup	Reverse phone search — identity, carrier, line type, associated profiles.
Email Lookup	Reverse email search — identity, social profiles, associated accounts.
Image Lookup	Reverse image search — public profile and web mentions of a face/photo.
VIN / Vehicle Lookup	VIN decode — make, model, history, registration.
SEO (expanded)	Extended landing pages per use case: tool benefits, reviews, FAQs, sitemap, robots.txt.

Success Criteria

Improve on V1 metrics. Targets to be defined once V1 is live.

❌ Out of Scope

Item	Notes
TBC: Upsell credit packs	Additional lookup credits at tiered pricing.
TBC: Upsell PDF download	Downloadable, printable report.
Upsell premium add-ons (e.g., sex offender registry)	Geo-restricted paid add-on per report.

Onboarding flow	Neither reference product (ClarityCheck, DeepSearch AI) includes onboarding on web.
Web ↔ Mobile connection	Web → App: Smart banner, deep-link to stores post-purchase, shared entitlement via RevenueCat user ID. App → Web: Share link, account portal on web, cancellation on web. Unified identity: Single account across surfaces with synced entitlements.
Ad slot architecture	No ads in V1. Reserved containers deferred to a future version.

3rd-Party Services

People Lookup (V1)

Same providers and logic as the app (Tavily).

V2 Lookup Types

All V2 use cases require further provider investigation. Initial candidates:

Use Case	Tier	Candidate Providers	Notes
 Phone	Shallow (carrier + line type)	Twilio Lookup, Telnix Lookup	Pennies per call.
 Phone	Deep (identity)	Endato / Tracers, Ekata (Mastercard)	Ekata is premium tier.
 Email	Validation / deliverability	ZeroBounce, NeverBounce, Kickbox	—
 Email	Identity	Endato / Tracers, Pipl	—
 Image	Reverse image search 	TinEye API, Bing Visual Search, SerpAPI	ClarityCheck uses reverse image only (not facial)

			recognition). Recommended approach.
 Image	Facial recognition ⚠️	PimEyes API	Restricted in Illinois (BIPA), EU (AI Act), Texas. Stripe and ad platforms may also flag.
 VIN	Decode (free)	NHTSA vPIC API	Free, US only, no history.
 VIN	Decode + history	VinAudit, ClearVIN, Marketcheck, DataOne	Carfax / AutoCheck are gold standard but partnership-heavy.
 Plate	Plate → VIN (no PII)	CarsXE, PlateToVIN	DPPA-compliant (US). Plate → owner PII legally restricted in the US. Europe: providers TBD.

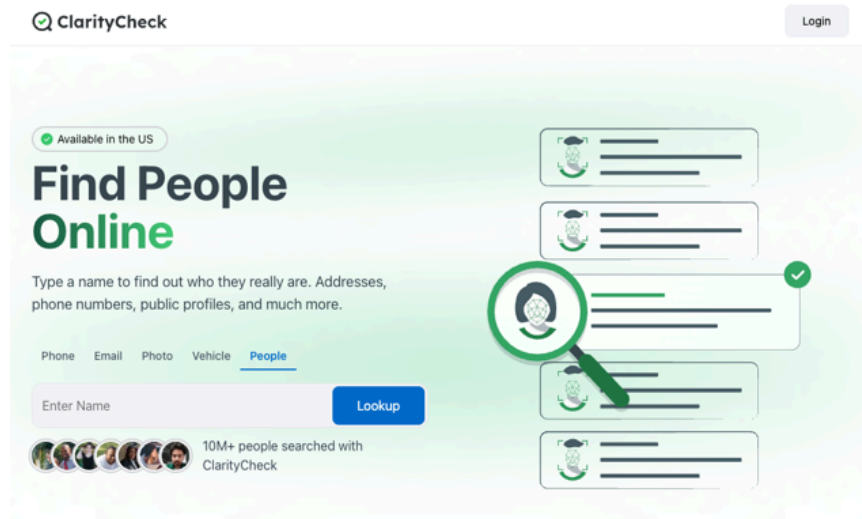

🕒 Timeline Estimation

TBD

See What You Can Find Out

Search public records to find information linked to a person's name. Results vary based on the person and available data sources.

 **Phone Numbers**
Discover phone numbers potentially associated with this person.

 **Home Address**
Uncover possible current and historical address information.

 **Family Members**
Discover potential family members and relatives.

 **Social Media Profiles**
Find associated social media profiles and usernames.

 **Email Addresses**
View any publicly available email addresses linked to this person.

 **Past Locations**
Historical addresses and regions associated with this person from public records.

 **Web Activity**
Find publicly available mentions from news, blogs, and directories (no real-time tracking).

Why Use People Lookup?

In today's digital world, having more information can help you make informed personal decisions. Our people lookup service can help you:

1

Find Lost Contacts. Reconnect with old friends, classmates, or family members you've lost touch with.

2

Verify Online Identities. Get more context about individuals you're interacting with online for personal safety.

3

Research Neighbors. Learn more about the people living in your neighborhood.

4

Check Your Digital Footprint. Search your own name to see what information is publicly available about you.

Additional Use Cases

✓ Verify sellers or buyers in personal online marketplace transactions.

✓ Check out potential roommates before sharing space.

✓ Reconnect with biological family members.

✓ Verify other parents' identities for family safety.

✓

Start Your 7-Day Trial

✓ Get a 7-day trial for just €1.00. After trial, we'll charge €29.99 every month until you cancel.
